THINH NGUYEN

charles.nguyen1701@gmail.com • Portfolio • LinkedIn • GitHub

SKILLS

Programming Languages: Java, Java Script, Type Script, Python, HTML, CSS, Lua, Linux
Front/Back-end: React, Handlebars, Apollo Client, Node.js, GraphQL, AWS S3, AWS Cloudfront
Database: PostgreSQL, MongoDB, AWS DynamoDB

EDUCATION

UC Berkeley Berkeley, CA
Certificate Full-Stack Developer Mar 2023 – Sep 2024

San Jose State University San Jose, CA
B.S. Applied Mathematics Sep 2019 – May 2022

De Anza College Cupertino, CA
A.S. Computer Science Sep 2017 – Jun 2019

EXPERIENCE

Failure Analysis Technician | FoxConn, San Jose, CA Jul 2025 – present

- Collaborate with engineering teams to investigate component failure using Python scripts and Linux command-line tools, identifying root causes efficiently.
- Develop and maintain Python automation scripts to improve testing quality and reduce test cycle time, helping the team finish projects ahead of schedule and quickly resolve failures.
- Partner with cross-functional teams to analyze results, discuss solutions, and implement corrective actions for process optimization.

PROJECTS

Call of Dragons Wiki | Personal Project | Live Product | GitHub Project Sep 2025 – present

- Built a full-stack web application to assist players in understanding heroes, artifacts, and pets in *Call of Dragons* using React, Chakra UI, and Node.js.
- Developed a secure GraphQL API with Node.js and Express; used Apollo Client for efficient query and mutation handling on the frontend.
- Implement MongoDB for data storage and designed schemas for all models; integrated AWS S3 and CloudFront for fast and reliable media delivery.
- Experimenting with AI features including review summarization, item comparison, and a chat assistant to enhance user experience.

Game Hub | Personal Project | Live Product | GitHub Dec 2024

- Created a web app that fetches data from the RAWG API, enabling users to search and discover games.
- Dynamically display, sorts, and filter retrieved game data to provide a personalized service.
- Added a Dark Mode toggle that changes the color scheme of the site for a modern browsing experience.

TeaLicious | Certificate Project | UC Berkeley | Live Product | GitHub Sep 2024

- Developed an ecommerce website as a group of five and architected the front-end and backend technologies using React, Apollo, GraphQL, MongoDB, AWS S3, and Stripe.
- Designed the user experience of the website for seamless navigation and a personalized shopping experience.
- Integrated Apollo Client for front-end and backend communication and AWS S3 for image storage.
- Implemented Stripe for processing secure transactions, the shopping cart and features like guest-to-member cart synchronization and real-time stock updates on successful transactions.

WebWeavers | Certificate Project | UC Berkeley | Live Product | GitHub Jul 2024

- Led a group of four to develop a web app that enables seamless interaction between recruiters and jobseekers.
- Created the application using Handlebars for dynamic content generation and enhance the user experience.
- Built and maintained backend API routes using Node.js and Express to manage user accounts and job postings.
- Implemented CRUD operations for jobs posts and user profile and added endpoints for job applications to ensure robust error handling and data validation.
- Designed and implemented PostgreSQL database model and middleware to manage and process data efficiently.
